

Week6-hulinxue(steps)

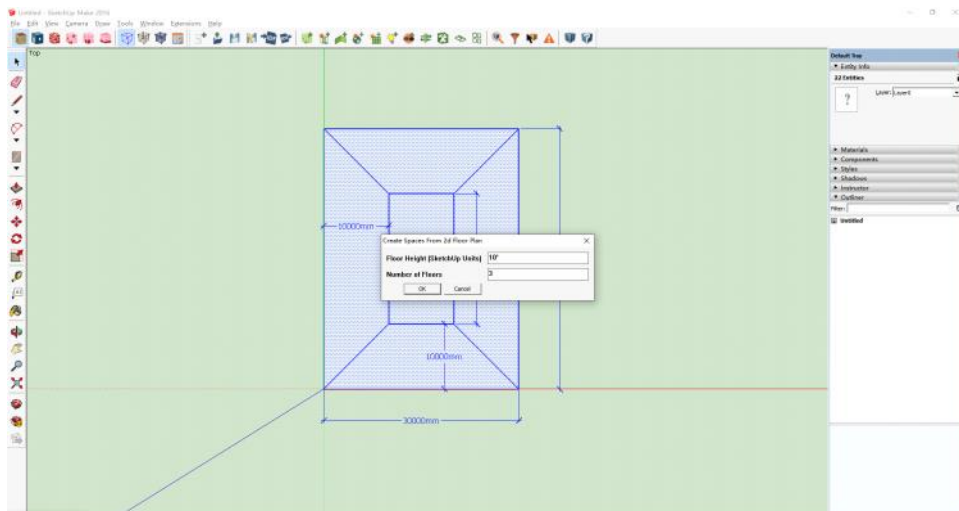

2019年11月12日 21:14

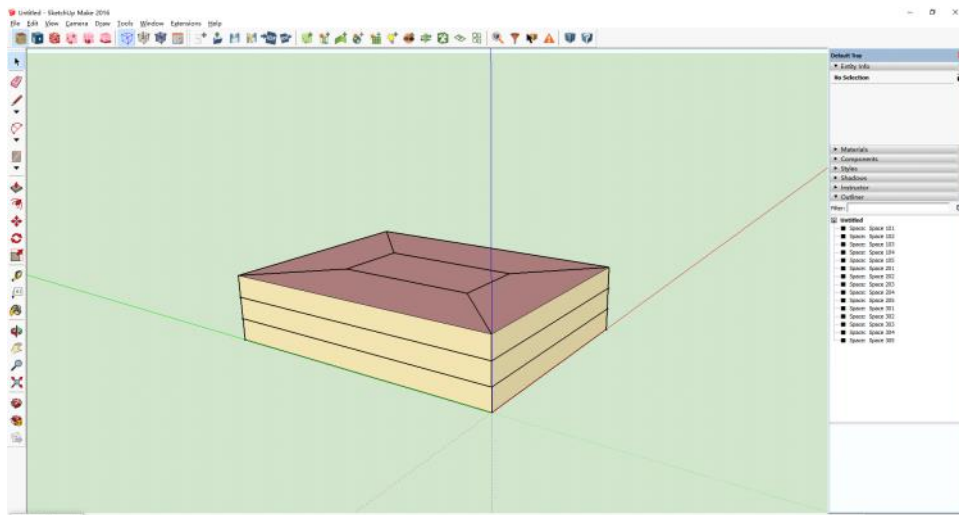

Task 2 You should create a pdf file with screenshots of all of the steps we went through and explain briefly the reason behind the use of each step

1-1 create a 40×30 rectangle(with the offset of 10m) and then connect the edges with 4 lines.

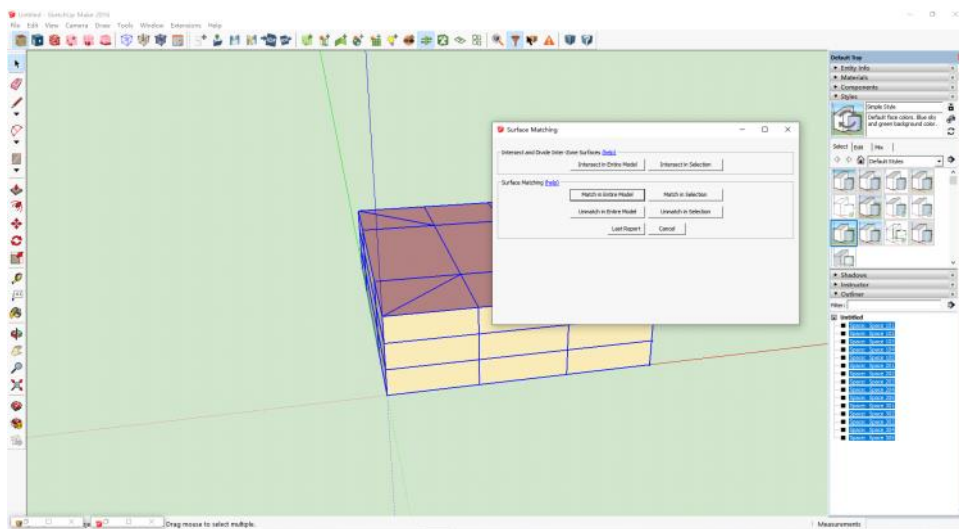

1-2 create the building from diagram,use"Create spaces from diagram"

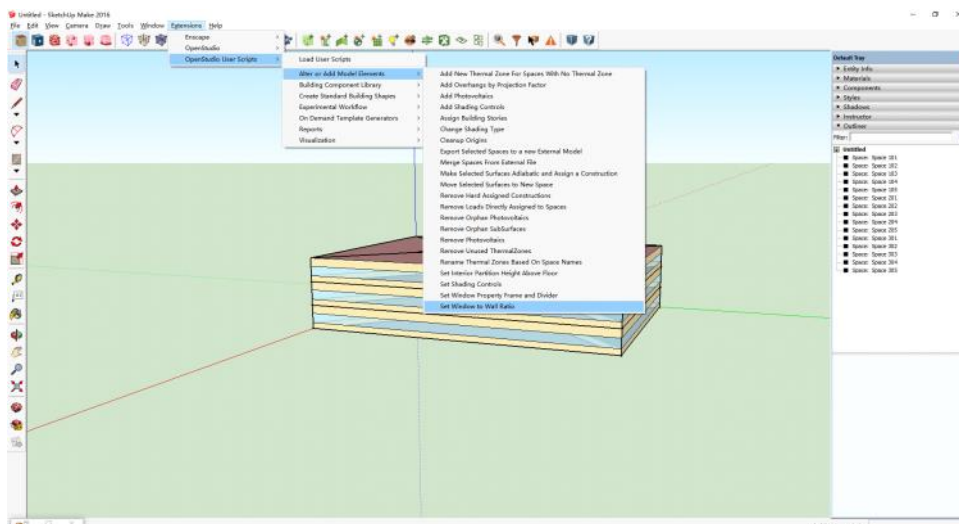

1-3 match surface

We have to match entire surface which means different surfaces have different identities.

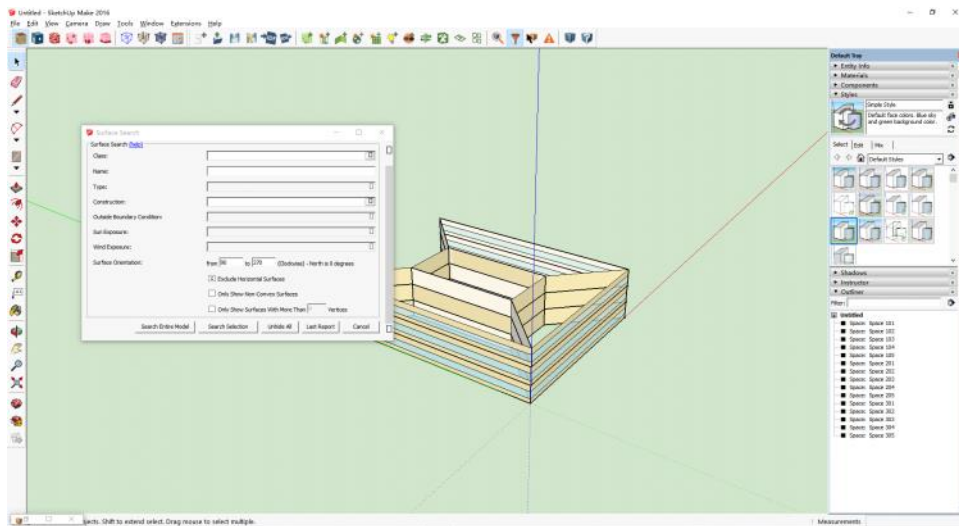

1-4 create windows

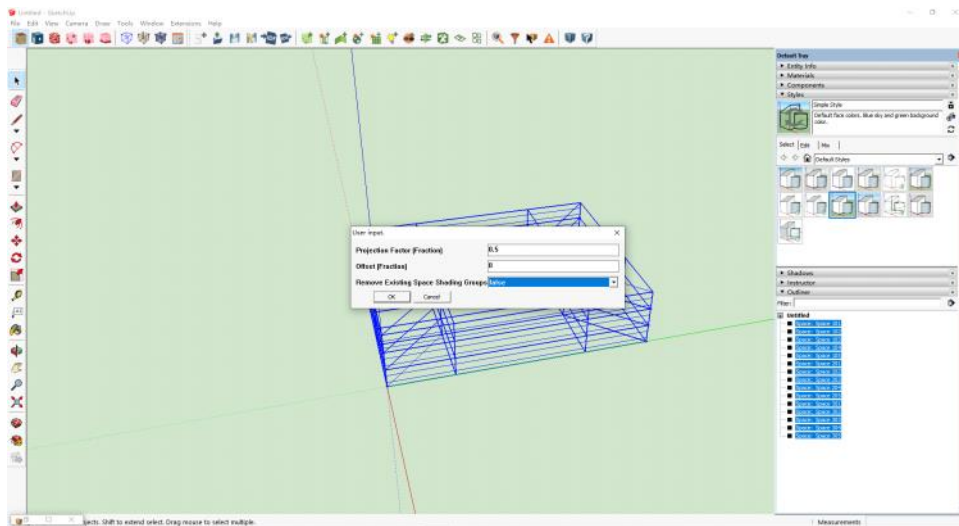

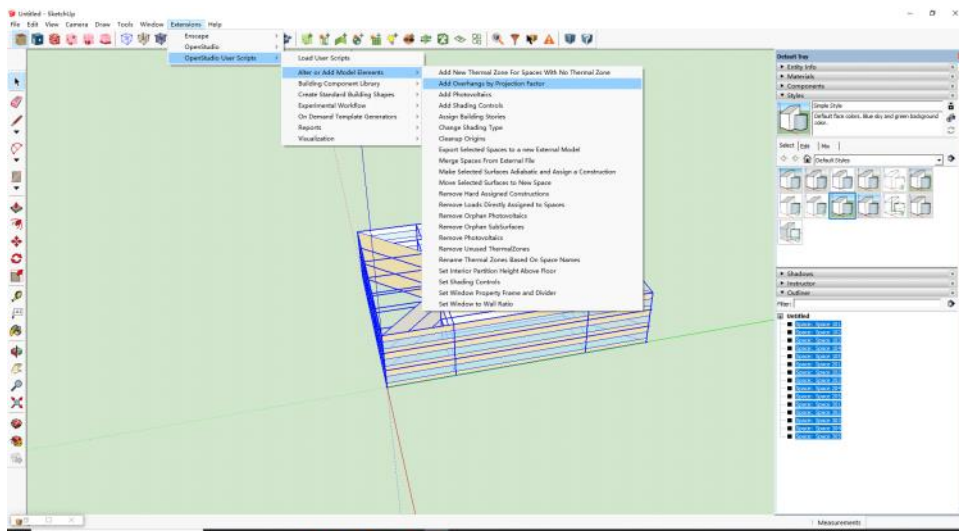

Then we click "set window to wall ratio" to create windows

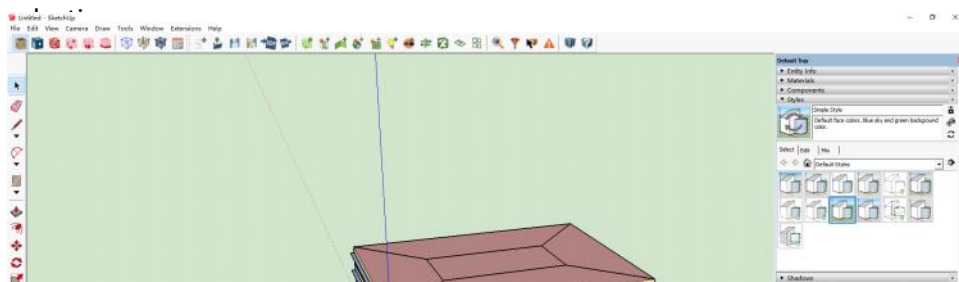

1-5 select surface

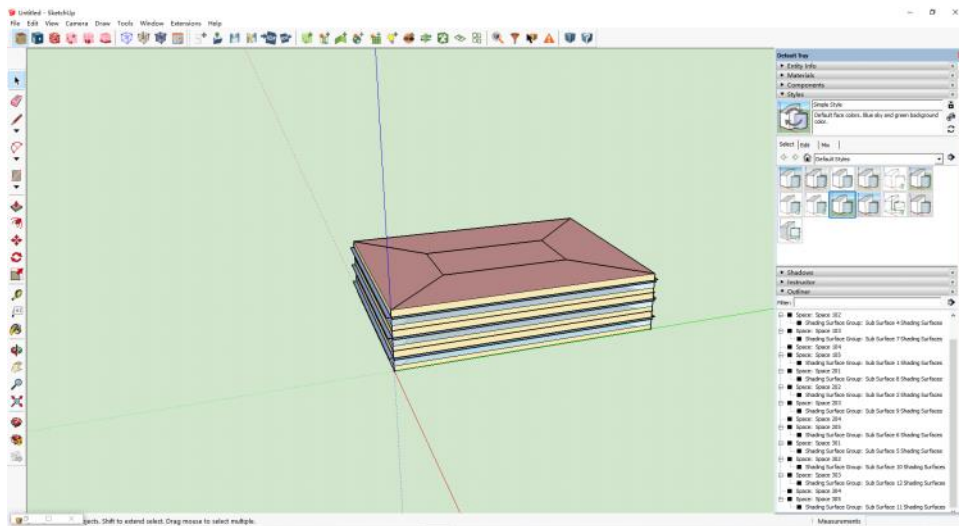

1-6 add shadow(click add overhangs by projection factor)

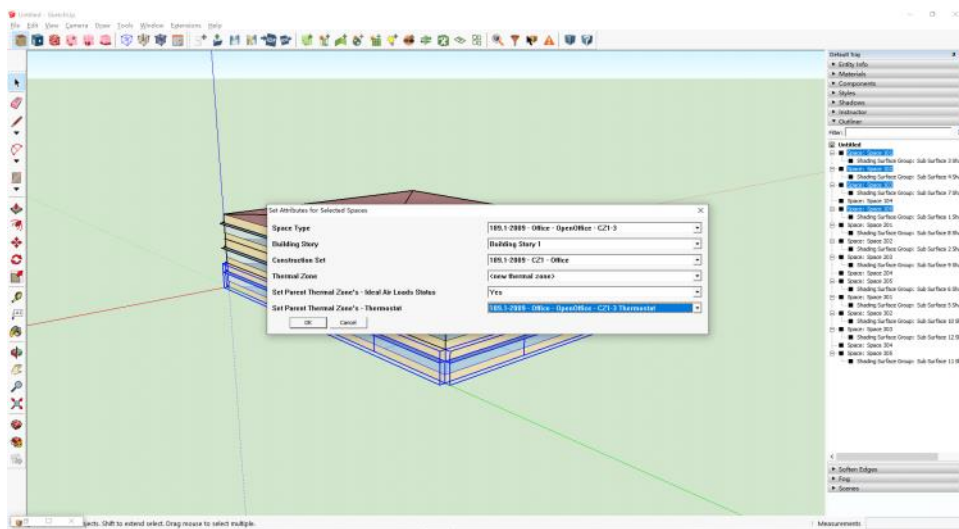

1-7 Then you should choose 0-360 surfaces so that you would go back to the previous

1-8 adding thermal zone

1-9 openstudio launch using sketchUpNext

We need to add the weather Data
